Thromb. Res. 85:503-514(1997).

I. FUNCTION: Reactor Xa is a vitamin K-dependent glycoprotein that converts prothrombin to thrombin in the presence of factor Va, calcium and phospholipid during blood clotting.

I. CATALITY CATIVITY: Preferential cleavage: Arg-| Thr and then Arg-|-11e bonds in prochrombin to form thrombin.

SUBUNIT: The two chains are formed from a single-chain precursor by the excision of two Arg residues and are held together by 1 or more disulfide bonds.

C. PIM: The vitamin K-dependent, enzymatic carboxylation of some converted and provided protein to bind calcium (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                    -!-PTM: N- and O-glycosylated (By similarity).
-!-PTM: THE ACTIVATION PEPTIDE IS CLEAVED BY FACTOR IXA (IN THE INTRINSIC PATHWAY), OR BY FACTOR VIIA (IN THE EXTRINSIC PATHWAY)
(BY SIMILARITY).
-!-MISCELLANBOUS: Calcium also binds, with stronger affinity to another site, beyond the GLA domain.
-!-SIMILARITY: Belongs to peptidase family S1.
-!-SIMILARITY: Contains 2 EGF-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BY SIMILARITY.

Tidentity of the organic cation transporter OCT3 as the extraneuronal monoamine transporter (uptake2) and evidence for the expression of the transporter in the brain.";

The transporter in the brain.";

J. Biol., Chem. 273:32776-32786(1998).

- FUNCTION: Mediates potential-dependent transport of a variety of organic cations. May play a significant role in the disposition of cationic neurotoxins and neurotransmitters in the brain.

- SUBCELLOUAR LOCATION: Integral membrane protein.

- SUBCELLOUAR LOCATION: Integral membrane protein.

- ITISSUE SPECIFICITY: HIGHLY EXPRESSED IN PLACENTA WITH MODERATE EXPRESSED, ESPECIALLY IN HIGHLY EXPRESSED.

EXPRESSED, ESPECIALLY IN HIPPOCAMPUS, CEREBELLUM AND CEREBRAL

- CORTEX. EXPRESSION IS LOW IN KIDNEY AND LUNG AND UNDETECTABLE IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. transporter OCT3 in the kidney.";

4m. J. Physiol. 279:F449-F458(2000).

-!- FUNCTION: Mediates potential-dependent transport of a variety of organic cations. May play a significant role in the disposition of cationic neurotoxins and neurotransmitters in the brain.

-!- SUBCELIOLAR LOCATION: Integral membrane protein.

-! TISSUB SPECIFICITY: EXPRESSED IN PLACENTA, SKELETAL MUSCIE, PROSTATE, AORTA, LIVER, FETAL LUNG, SALIVARY GLAND, ADERRAL STANDEY AND BRAIN CORPERS. NO EXPRESSION DETECTED IN SPLEEN.

-!- SIMILARITY: Belongs to the sugar transporter family. Organic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GO; GO:0005887; C:integral to plasma membrane; TAS.

-1-SUBUNIT: Homodiner (By similarity).
-1-SUBUNIT: Homodiner (By similarity).
-1-SUBCELLUIAR LOCATION: Nuclear (By similarity).
-1-DEVELOMENTAL STAGE: At 10.5 and 12.5 dpc, expressed in the central nervous system. At 14.5 dpc, expressed in the eye (lens and inner neural layer of the retina), in the primitive glomeruli of the developing kidney, in the villi of the gut and in the dorsal root ganglia.
-1-DOMAIN: The coiled coil domain is required for homodimerization (By similarity).

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphanglogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues. Novel

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

Novel pro Human sec

Streptoco

residues.

peptides toop integrate it is exposed in exposed in according cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with a teast one amino acid deleted prior concilisation are used to interfere with angiogenesis.

To cyclisation are used to interfere with angiogenesis.

The condition is diabetic retinopathy, psoriasing arthropathy, cerebrovascular secident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive corresponded angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, nypertension induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cor brain. The peptides are used to image blood vessels and lymphatic cor brain. The peptides are used to image blood vessels and lymphatic cor brain the neoripheral limbs or in lungs, peritoneal cavity, pleura, cor brain the least one biological activity induced by VEGF. VEGF-C or -D and care also used in combination with an anti-inflammatory agent, to treat a correction in peritone with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human whose 3-dimensional structure is modelled on the expose loop of human construction relates to a method of producing a monomeric monocyclic peptide by a measuring beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior corpitation are used to interfere with angiogenesis.

CC cyclisation are used to interfere with angiogenesis.

CC corpitation are used to interfere with angiogenesis.

CC characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC characterised by angiogenesis, neovascularisation of the liver, excessive creamns substance-induced neovascularisation of the liver, excessive creamns unduced neovascular sequelae, hypertension induced neovascular sequelae, neovascular confiction. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition diabetes induced neovascular confiction in peripheral limbs or in lungs, peritoneal capity, pleura, or brain. The peptides are used to indeption or brain. The peptides are also used to indeption are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and characterise are also used in combination with an unit infilammatory agent, to treat a characterise are also used in combination with an anti-inflammatory of the treat and previous peritonic inflammation in peripherally with an anti-inflammatory of are also and archiris inflammation in peripherally. The mannally archirate and province in the mannal activity i

Alkene mon:oxygenase and corresp. gene - useful for the epoxidation of an E.coli transformed with the DNA sequence AAQ79569 are able to catalyse the epoxidation of alkenes. The DNA is derived from Nocardia corallina and comprises 4 open reading frames. ORFs amoA and amoC encode subunits and 2 of the alkene monoxygenase enzyme and ORF amoD encodes a reductase capable of transferring electrons from NADH coenzyme to a monoxygenase. (Updated on 16-OCT-2003 to standardise OS field) AAR81472 standard; protein; 342 AA. Claim 2; Page 4-5; 30pp; Japanese. RESULT 5 AAR81472 à 엄 The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human values and of vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabet a carbon separation distances on opposite antiparallel strands of a cyclising the peptide by oxidising the cystein ersidues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid delated prior or cyclisation are used to interfere with angiogenesis.

Co cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition. The condition is diabetic retinopathy, psoriasis arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive conference-induced neovascular sequelae, or chronic liver in fertion. The peptides are also used to modulate vascular permeability accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are also used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are also used to interfere with at least one biological activity induced by VEGF. Core or and are also used to condition are also used to circuic and activity induced by vasculature to treat a chonic inflammation, especially rheumatoid arthritis, psoriasis and circuic renimants. Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

Alkene mono-oxygenase; indole; indigo production; biosynthesis; Nocardia corallina alkene mono-oxygenase gene product, amoD. Gordonia rubripertinctus; B-276. (first entry) microbial oxidation; dye. (revised)

94JP-00179688 94JP-00179688 38-JUL-1994; JP08023988-A. 08-JUL-1994; 30-JAN-1996

(NIHA) JAPAN ENERGY CORP. WPI; 1996-133426/14. N-PSDB; AAT17418. Prepn. of indigo by a microbiological method - by culturing a microbe having alkene monoxigenase activity to oxidise indole to indigo. Claim 5; Page 8-9; 11pp; Japanese. AAR81469-R81472 are protein products of the Nocardia corallina strain B-276 alkene mono-oxygenase gene. The gene encodes 4 protein products amoh, amob, amob, amob darived from the 3 different reading frames of the operon. The gene is useful for the production of indigo via oxidation of indole. Nocardia corallina can be cultured in a medium cong. indole and will readily oxidise the indole yielding indigo into the culture medium. E. coli may also be transformed with the alkene mono-oxygenase gene and (Updated on 16-OCT-2003 to standardise OS field)

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGPD (vascular endothellal growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VBGF. Or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy

Characterised by angiogenesis, neovascularisation or lymphangiogenesis.

Characterised by angiogenesis, neovascularisation or lymphangiogenesis.

Che condition is diabetic retinopathy, psoriasis, arthropathy.

Che condition is diabetic retinopathy, psoriasis, arthropathy.

Cerebrovascular accident, post-angioplasty restenosis, head, heat or claume, substance-induced neovascularisation of the liver, excessive craume, substance-induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one bhological activity induced by VEGF, VEGF-C or -D and chronic inflammation, especially rheumatoid arthritis, psoriasis and althritis, psoriasis and althritis, psoriasis and althritis.
cyclisation are used to interfere with angiogenesis,

Claim 10; Page 264; 715pp; English

Novel fetal proteins useful for the treatment and diagnosis of diseases associated with dysfunction of the protein e.g. cancers, immune disorders, growth disorders, thrombolytic disorders, nervous system disorders and inflammation.

polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity

```
0;
The invention relates to novel foetal polypeptides encoded by polymuclectides comprising one of 477 sequences fully defined in the specification. The foetal polymuclectides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence is a polypeptide encoded by a cDNA assembled using an expressed sequence tag (EST) found to be expressed in human foetal tissue cDNA libraries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II) and (II) are useful for treating disorders involving a food sites expressing (II). (II) and (II) are useful for treating disorders involving a berrant protein expression or biological activity. The

and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodiss that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABPP6736-ABP81046 represent nucleic acid molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              manufacture of

The invention relates to a rat cubilin protein. Cubilin is a ligand-
binding, epithelial glycoprotein receptor that facilitates uptake of
intrinsic factor/vitamin Bl2 complexes in intestines and Kidney. It is
also involved in endocytosis and trafficking of light immunoglobulin
claims in renal proximal tubule cells. Host cells containing a vector
comprising the rat cubilin DNA sequence can be used for the recombinant
expression of the protein. Cubilin, or its fragments, are used to treat
or reduce toxicity, particularly in Kidneys, spheen, brain, liver, heart
and thyroid. Cubulin mutations may also be implicated in idiopathic
proteinuria, fetal malformation, poor fetal development and spontaneous
proteinuria, fetal malformation, poor fetal development and spontaneous
proteinuria, fetal malformation, poor fetal development and spontaneous
corrections. Cubilin may also be used to raise specific antibodies, used
for its detection, or clones that express it, in standard immunoassays.
Fragments of cubilin DNA can also be used to detect cubulin mRNA in cell
and tissues, by hybridization. Abnormal levels of cubilin in the urine
are indicative of kidney damage. Sequences ANI27021-35 represent EGF
repeat sequences of rat cubilin and from homologous regions of other
                                                                                                                                                                   Cubilin, epithelial glycoprotein receptor; vitamin B12; endocytosis; toxicity; kidney; spleen; brain; liver; heart; thyroid; abortion; rat; proteinuria; fetal malformation; fetal development; kidney damage; EGF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New DNA encoding cubilin, used for treating toxicity, particularly nephrotoxicity, and as marker of kidney damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .,

Claim 1; Page; 222pp; English.

as targets of gene therapy

marker

```
The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polynuclectide or its partial peptide, an antibody binding to the polypeptide or peptide or peptide of the polynuclectide by contacting the polypeptide or peptide or peptide by contacting the polypeptide or peptide or peptide by contacting the polypeptide or peptide or the polynuclectide by contacting the polypeptide or peptide or peptide between the two, a transformant carrying the polynuclectide in an expressible manner and an antisense polynuclectide. The oligonuclectide is useful as a primer for synthesising the polynuclectide and encoded or suseful as paramaceutical agents and many disease-related or genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets or genes therapy. The genes are involved in tissue and/or cell creamscription-related proteins, signal transduction-related proteins, creameration. Membrane proteins, signal transduction-related proteins, creameration to transcription-related proteins, diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The concurry or expression of the encoded protein to treat diseases. The sequence data for this patent is not represented in the printed concerns between the printed in the printed or sequence or sequence data for this patent is not represented in the printed or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or sequence or se

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents novel infection-specific protein IncB of chlamydia psittaci strain GPIC. IncB is found in the inclusion membrane of infected cells. It is associated primarily with the vegetative reticulate body form of Chlamydia rather than with the refractile elementary body form. The invention includes: a vaccine directed against the reticulate body form of Chlamydia comprising 1 or more infection-specific proteins (see AAY3170-78), including IncA, IncB and IncC; methods of using and producing such a vaccine; methods for detection of mifection-specific antibodies or antigens in a biological specimen; and a method of using therapeutic agents specifically directed against infection-specific peptides, or the genes that code for such peptides, to reat, chlamydial infection. New Acinetobacter baumanni proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for
                                                                                                                                                                         The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7137-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

Sequence 7, Application US/09761636A

Patent No. US20020065218A1

GENERAL INFORMATION:
APPLICANT: ACHEN, Marc

APPLICANT: STACKER, Steven

APPLICANT: ENDROW, Angela

TITLE OF INVENTION: VEGF-D/VEGF PEPTIDOMIMETIC INHIBITOR

FILE REFERENCE: 1064/48505 Achen et al

CURRENT APPLICATION NUMBER: US/09/761,636A

CURRENT FILING DATE: 2001-01-18

PRIOR APPLICATION NUMBER: US 60/176,293

PRIOR PILING DATE: 2000-01-18

PRIOR PILING DATE: 2000-01-18

PRIOR PILING DATE: 2000-01-18

NUMBER OF SEQ ID NOS: 34

NUMBER OF SEQ ID NOS: 34

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Sequence 5, Application US/08499215
| Patent No. 5612204
| GENERAL INFORMATION:
| APPLICANT: Saeki, Hisashi
| APPLICANT: Miura, Akira
| TITLE OF INVENTION: BIOLOGICAL DEGRADATIVE
| TITLE OF INVENTION: TREATMENT OF CHLORINE-SUBSTITUTED ETHYLENE
| TITLE OF INVENTION: TREATMENT OF CHLORINE-SUBSTITUTED ETHYLENE
| TITLE OF INVENTION: TREATMENT OF CHLORINE-SUBSTITUTED ETHYLENE
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Sughrue, Mion, Zinn, Macpeak & Seas
| STREET: 2100 Pennsylvania Avenue
| CITY: N.W. | STATE: Washington D.C.
                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 41; DB 1; Length 342;

Sequence 6901.

Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: BAUNANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 6901
                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2, Application US/09341461

Fatent No. 6586399

GENERAL INFORMATION:

APPLICANT: Hammond, Timothy G.

TITLE OF INVENTION: Cubilin Protein, DNA Sequences Encoding Cubilin

TITLE OF INVENTION: and Uses Thereof

TITLE OF INVENTION: and Uses Thereof

FILE REFERENCE: D6148

CURRENT FPLIANG DATE: 200-07-20

PRIOR APPLICATION NUMBER: PCT/US99/01259

PRIOR FILING DATE: 1999-01-21

NUMBER OF EQ ID NOS: 40

SEQ ID NO 2

LENGTH: 3623

Sequence 20960, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 20960

LENGTH: 90

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                   Sequence 11. Application US/08107684B

Patent No. 5552273

GENERAL INFORMATION:

APPLICANT: CLEGIZIAT, Philippe L.

APPLICANT: ROBERT-BAUDOUY, Jeannine

APPLICANT: ROBERT-BAUDOUY, Jeannine

APPLICANT: GAPTAL, Jean-Pietre

TITLE OF INVENTION: POLYPETIDES CONTAINING SEQUENCES

TITLE OF INVENTION: CHARACTERISTIC OF PYRROLIDONE CARBOXYLYL PEPTIDASES,

TITLE OF INVENTION: POLYPETIDES CONTAINING A SEQUENCE CODING FOR SUCH

TITLE OF INVENTION: POLYPETIDES, AND THEIR USE, IN PARTICULAR FOR DIAGNOSTIC

NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .
